Projects

Campus Accessibility Map

Web application developed to help students report and discuss issues and solutions related to campus mobility. N8N workflows were implemented to send and receive created pinpoints to the website to the database. The backend was developed using AWS and Github actions.

Blind Accessible Chess Game

Python application created with pygame that uses keyboard presses and text to speech to allow a user to play computer chess without sight. Included a GUI, player vs player mode, and player vs computer mode. Organized the project and developed piece movement and capturing. Documented each stage of the project and met with teammates weekly to discuss progress and troubleshoot issues.

Workout Assistant

Java application that walks users through workouts step-by-step. The application included an editable glossary and a calendar for tracking user progress and routines. Developed UI in JavaSwing and designed the framework of how the application would be laid out.
